The Automation Recipes

# AI Automation Recipe: Autopilot Affiliate Review Videos

## What This Recipe Does:

This recipe creates affiliate review videos automatically, so you can publish content that builds trust and drives sales without recording yourself on camera. AI handles the script, voiceover, visuals, and even scheduling, turning reviews into a hands-off traffic and conversion machine.

## What You'll Need:

1. An AI video tool (*Pictory, InVideo, or Synthesia*)
2. An AI writing tool (*ChatGPT, Jasper, or Claude*) for scripts
3. A YouTube account or video hosting platform

## How To Set It Up:

Use AI to generate a review script based on the product's features, benefits, and your unique bonus or angle. Feed the script into your video tool to create a finished video with AI voiceover, stock footage, or product images. Upload and schedule the video on YouTube or your platform of choice. Add your affiliate link in the description and pinned comment for easy conversions.

## What To Expect:

You'll have professional-looking review videos published consistently, even if you never record a second of footage yourself. Each video works as a 24/7 sales asset, driving traffic and affiliate commissions on autopilot.

**Pro Tips:**

- ⇒ Keep videos short and focused (*3-7 minutes works best*).
- ⇒ Always include your affiliate link near the top of the description.
- ⇒ Use AI to generate multiple scripts with slightly different angles to test which gets more clicks.
