

The AI Automation Code For Affiliate Marketers

The Automation Recipes

AI Automation Recipe: Autopilot Blogging

What This Recipe Does:

This recipe keeps your blog running without you hovering over it. AI handles keyword research, content creation, formatting, adding images, and publishing on a schedule. *The result?* A blog that looks consistently fresh, pulling in traffic 24/7 without you grinding out every post.

What You'll Need:

1. A WordPress site
2. An AI blogging tool (*WP AI Writer, RapidTextAI, or similar*)
3. An AI image tool or stock image library for visuals

How To Set It Up:

Install your AI blogging tool and connect it to your WordPress site. Configure your categories, tags, tone, and content rules so the posts match your brand voice. Add your keyword list (*or let the AI tool generate suggestions*). From there, set your publishing schedule. Daily, weekly, or whatever pace fits your strategy. Once the rules are in place, the system will automatically create, format, and publish posts without your input.

What To Expect:

Your blog will keep producing new, optimized posts that feed both your audience and search engines. Readers see consistency, your site grows authority, and you're not chained to content creation.

Pro Tips:

- ⇒ Start small with weekly posts to test quality before scaling.
- ⇒ Monitor your analytics and double down on the topics that get traction.
- ⇒ Use internal linking settings so the AI naturally connects posts together.
