

The AI Automation Code For Affiliate Marketers

The Automation Recipes

AI Automation Recipe: Autopilot Bonus Creation And Delivery

What This Recipe Does:

This recipe takes the headache out of creating and delivering bonuses for your affiliate offers. AI generates high-value bonus assets like checklists, guides, or templates, and an automated system delivers them instantly when someone buys through your link. No manual follow-ups, no spreadsheets... just seamless delivery!

What You'll Need:

1. An AI content tool (*ChatGPT, Jasper, or similar*)
2. A delivery platform (*ThriveCart, Gumroad, or WarriorPlus*)
3. Canva or an AI design tool to polish up bonus materials

How To Set It Up:

Use AI to create your bonus asset(s). For example, a short guide, checklist, or template that complements the affiliate product. Format it into a PDF or digital file. Next, connect your delivery platform to verify purchases and automatically send the bonus via email or download link. Test the flow once to make sure delivery is instant and reliable.

What To Expect:

Your affiliate offers stand out with attractive bonuses, and customers receive them instantly after purchase. You'll never waste time sending bonuses manually or worrying about missed deliveries.

Pro Tips:

- ⇒ Keep bonuses specific to the product so they feel highly valuable.
- ⇒ Use AI to repackage old content into fresh bonuses quickly.
- ⇒ Add branding to your bonuses to keep your name in front of buyers.
