

# The AI Automation Code For Affiliate Marketers

The Automation Recipes

# AI Automation Recipe: Autopilot Compliance And Link Health Monitor

## What This Recipe Does:

This recipe protects your commissions and keeps you compliant by monitoring your site automatically. AI checks for broken affiliate links, missing FTC disclosures, and potential compliance issues so problems are caught before they cost you sales or get you in trouble.

## What You'll Need:

1. A link monitoring tool (*Broken Link Checker* or *Lasso*)
2. A compliance tool (*WP AutoTerms* or *Termageddon*)
3. A workflow platform (*Zapier* or *Make*) connected to AI for weekly scans and summaries

## How to Set It Up:

Install a link monitoring tool to crawl your site for dead or redirected affiliate links. Add a compliance plugin to automatically generate and display FTC disclosures. Set up an automation that runs weekly scans and sends AI-generated reports to your inbox, flagging issues for quick fixes.

## What To Expect:

Your site stays clean, compliant, and profitable without you manually checking links or disclosures. You'll avoid the embarrassment of broken links and the risk of lost commissions while making sure regulators can't ding you for missing disclosures.

**Pro Tips:**

- ⇒ Schedule scans weekly so issues get fixed before traffic is wasted.
- ⇒ Customize your FTC disclosures so they blend with your brand voice.
- ⇒ Keep a backup offer ready! If AI flags a dead link, swap in an alternative affiliate link right away.
