

The AI Automation Code For Affiliate Marketers

The Automation Recipes

AI Automation Recipe: Autopilot Content Repurposing

What This Recipe Does:

This recipe multiplies your reach by turning one piece of content into many. AI automatically repurposes blog posts, emails, or videos into multiple formats (*social posts, scripts, pin descriptions, even short-form videos, etc.*) and schedules them to publish. **You create once, AI spreads it everywhere!**

What You'll Need:

1. A repurposing tool (*Repurpose.io, Missinglettr*)
2. An AI content generator (*ChatGPT, Jasper, or Claude*)
3. A scheduling tool (*Buffer, Publer, or Hootsuite*)

How To Set It Up:

Feed your original content into your repurposing tool or AI generator. Define the formats you want (*e.g., blog-to-social snippets, email-to-Reel script, blog-to-Pinterest pin*). Connect your scheduler so the repurposed pieces are automatically queued and posted. Once it's set up, the process runs in the background while you focus on new content ideas.

What To Expect:

Your content appears across multiple platforms without you rewriting it all by hand. Instead of just one blog post or email, you'll have a steady stream of social updates, visuals, and short scripts promoting your affiliate links on autopilot.

Pro Tips:

- ⇒ Always link repurposed content back to your blog or opt-in page to build your list.
- ⇒ Mix formats (*short quotes, list-style posts, video snippets, etc.*) to keep content varied.
- ⇒ Refresh your repurposing system monthly with new content inputs so it doesn't recycle the same material too often.
