

The AI Automation Code For Affiliate Marketers

The Automation Recipes

AI Automation Recipe: Autopilot Customer Interaction

What This Recipe Does:

This recipe takes customer questions and basic support off your plate by using AI chatbots and automated messaging. Instead of being chained to your inbox or DMs, you'll have a system that can answer FAQs, recommend affiliate products, and guide people toward your offers 24/7.

What You'll Need:

1. A chatbot or messaging tool (*ManyChat or Tidio*)
2. An AI content generator (*ChatGPT or a chatbot integration*)

How To Set It Up:

Connect your chatbot tool to your website, social media, or messenger platforms. Use AI to create responses to common questions, set up automated flows that guide people toward your affiliate products, and integrate with your email system for tagging or delivering bonuses. Test the flow to make sure the bot answers smoothly and directs people to the right next step.

What To Expect:

Customers and prospects get fast answers and instant product recommendations without you ever logging in. Your business looks more professional and responsive, and you'll have more time for higher-level work.

Pro Tips:

- ⇒ Keep chatbot responses short and natural so they feel human.
- ⇒ Always offer an option to connect with you directly if needed.
- ⇒ Use the chatbot to deliver bonuses instantly after purchase. This is a nice touch that builds trust.
