

# The AI Automation Code For Affiliate Marketers

The Automation Recipes

# AI Automation Recipe: Autopilot Niche Research And Discovery

## What This Recipe Does:

This recipe keeps your finger on the pulse of your market by using AI to scan for new products, trends, and sub-niches. Instead of spending hours digging through forums, affiliate networks, and search results, you'll have a system that delivers profitable opportunities right to you.

## What You'll Need:

1. A trend-tracking tool (*Exploding Topics, Google Trends*)
2. An AI research assistant (*ChatGPT, Claude, or Perplexity*)
3. Zapier or Make to automate data collection and summaries

## How To Set It Up:

Set up alerts in tools like Exploding Topics or Google Trends for keywords in your niche. Connect these alerts to an automation platform to send new data into a spreadsheet or directly to your inbox. Use AI to summarize the findings and highlight which trends or products are worth testing. Update your affiliate content strategy with the opportunities the system surfaces.

## What To Expect:

You'll stay ahead of the curve without manual research marathons. New content ideas, affiliate products, and market shifts come to you automatically, giving you a competitive edge over affiliates still chasing yesterday's trends.

**Pro Tips:**

- ⇒ Watch for repeat mentions! If a trend pops up in multiple places, it's a signal to act fast.
- ⇒ Pair trend alerts with AI content creation to quickly spin up posts or reviews.
- ⇒ Don't chase every shiny object. Filter results to what actually matches your business model.
