

The AI Automation Code For Affiliate Marketers

The Automation Recipes

AI Automation Recipe: Autopilot Reporting And Analytics

What This Recipe Does:

This recipe removes the hassle of manually checking multiple dashboards to figure out what's working. AI automatically collects your affiliate stats, ad performance, and email data, then compiles it into simple, actionable reports. You get the big picture without drowning in spreadsheets.

What You'll Need:

1. A reporting tool (*Google Looker Studio*)
2. An automation platform (*Zapier, Make, or n8n*)
3. Optional: ChatGPT or another AI tool for plain-language summaries

How To Set It Up:

Connect your affiliate networks, ad platforms, and email service to your reporting tool. Set up automations to pull in fresh data daily or weekly. Use AI to summarize results into easy-to-read updates. Highlighting wins, losses, and suggested next steps. Schedule these reports to hit your inbox automatically.

What To Expect:

You'll have clear insights delivered on a regular basis without ever logging into multiple platforms. This lets you make smarter, faster decisions about where to double down and what to cut.

Pro Tips:

- ⇒ Start with a weekly report, then move to daily once you're comfortable.
- ⇒ Include visuals like charts or graphs so results are easy to spot.
- ⇒ Use AI summaries to cut through the noise and focus only on what matters.
