

The AI Automation Code For Affiliate Marketers

The Automation Recipes

AI Automation Recipe: Autopilot Social Media

What This Recipe Does:

Social media doesn't have to eat your life. This recipe uses AI to generate posts, captions, images, and even short-form video scripts and then schedules them across multiple platforms automatically. You get the visibility and consistency without the daily grind.

What You'll Need:

1. A scheduling tool (*Publer or Buffer*)
2. An AI content generator (*ChatGPT, Jasper, or a social-focused AI like Predis.ai*)
3. Canva or another AI image tool for graphics

How To Set It Up:

Decide which platforms matter most for your niche (*Facebook, Instagram, X, LinkedIn, Pinterest, etc.*). Feed AI your content themes, offers, or blog post links, and let it draft posts tailored for each platform. Upload the posts to your scheduler (*or use an AI-integrated scheduler*), set your posting frequency, and let the system drip out your content automatically.

What To Expect:

Your social channels stay active 24/7 with posts that drive traffic back to your blog, opt-ins, or affiliate offers. You'll look consistent and professional without being chained to your phone.

Pro Tips:

- ⇒ Batch-create a month of posts with AI in one sitting and then let the scheduler run it.
- ⇒ Repurpose blog content into multiple post formats (*quotes, carousels, reels, tweets*).
- ⇒ Use analytics in your scheduler to let AI refine your best-performing content types.
